HTTP-File-Push-and-Pull

Push and pull files from and to a webserver (PHP, HTML and Java)

On Webserver:

Place files to */webroot/*

- get.php
- upload.php
- data (folder)

Place files to */webroot/data*

- .auth.get.php
- .auth.upload.php
- .htaccess

Update content of

- .auth.get.php

- .auth.upload.php

    Replace <key1> and <key2>

To use the Webfrontend

Place file to */webroot/*

- upload.html

Java:

Upload a file (demo.txt) via Java:

- HTTP_Upload.java

- HTTP_Download.java

    Update url, url and key first!

Required libs:

- Apache HttpClient
- Apache HttpCore
- Apache Commons HttpClient
- Apache Commons Logging
- Apache Commons Codec
